Agentic research workflows

Nickolas K. Freeman

Institute of Data and Analytics · Culverhouse College of Business

Agentic AI session · 240 Bidgood Hall · October 16, 2026

Topics

- **Voice for context**

  Speak the whole picture instead of typing a careful prompt, so the model can reason about what we are trying to do

- **Loops**

  Give the agent success criteria and a way to check its work, then let it repeat until it meets them

- **Adversaries and skeptics**

  Subagents that attack the work, ideally a different model (the Codex plugin, a newer version, or another vendor)

- **Pictures and video**

  Diagrams and short videos that keep us caught up with what the agents have done

Voice for context

"One pattern I find useful for working with LLMs is a nice long ramble session. Sometimes the LLM needs more bits to understand what you're trying to achieve..."

Andrej Karpathy, on X, July 21, 2026

"Fun fact: I do most of my coding by speaking to Claude, rather than typing."

Boris Cherny, on X, March 29, 2026

Loops

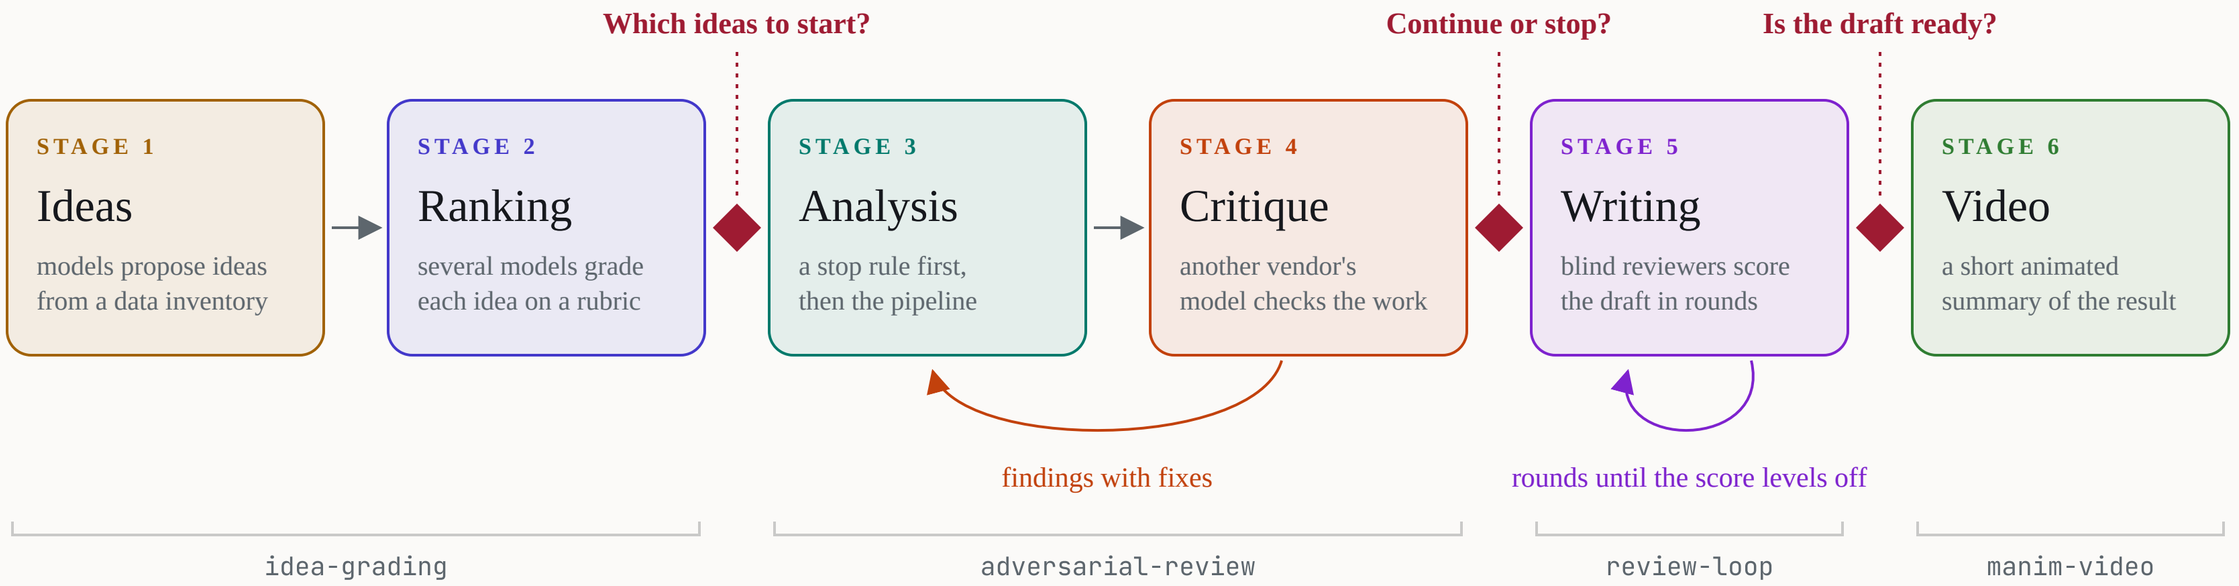

"LLMs are exceptionally good at looping until they meet specific goals... Don't tell it what to do, give it success criteria and watch it go."

Andrej Karpathy, on X, January 26, 2026

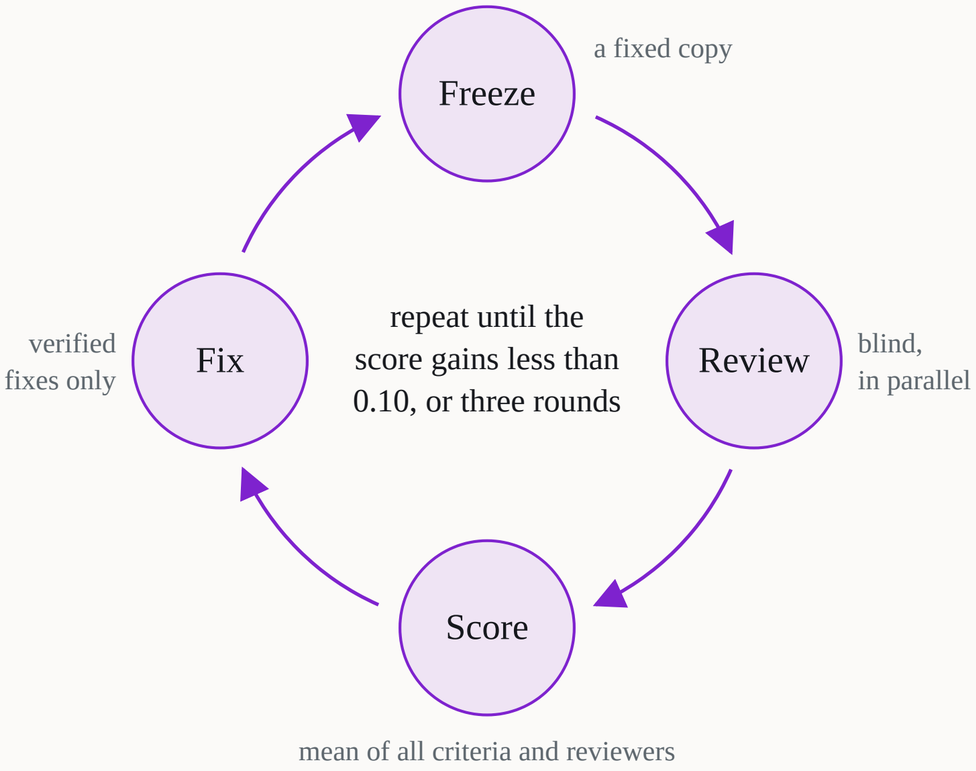

"Probably the most important thing to get great results out of Claude Code: give Claude a way to verify its work. If Claude has that feedback loop, it will 2-3x the quality of the final result."

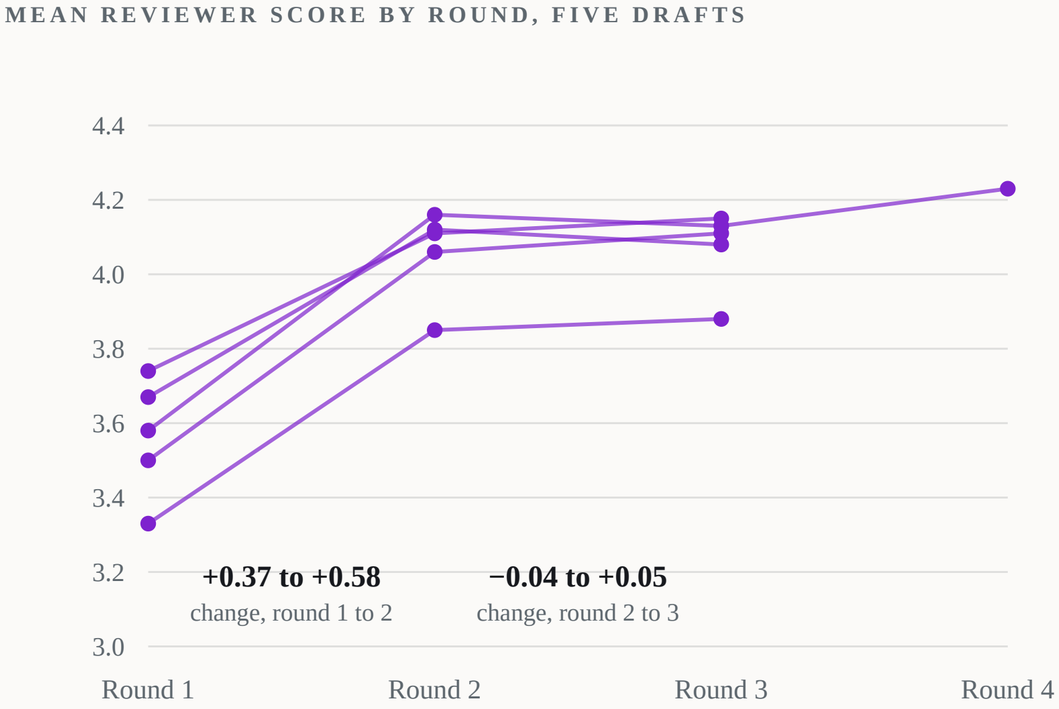

Boris Cherny, on X, January 2, 2026

The workflow

The writing loop

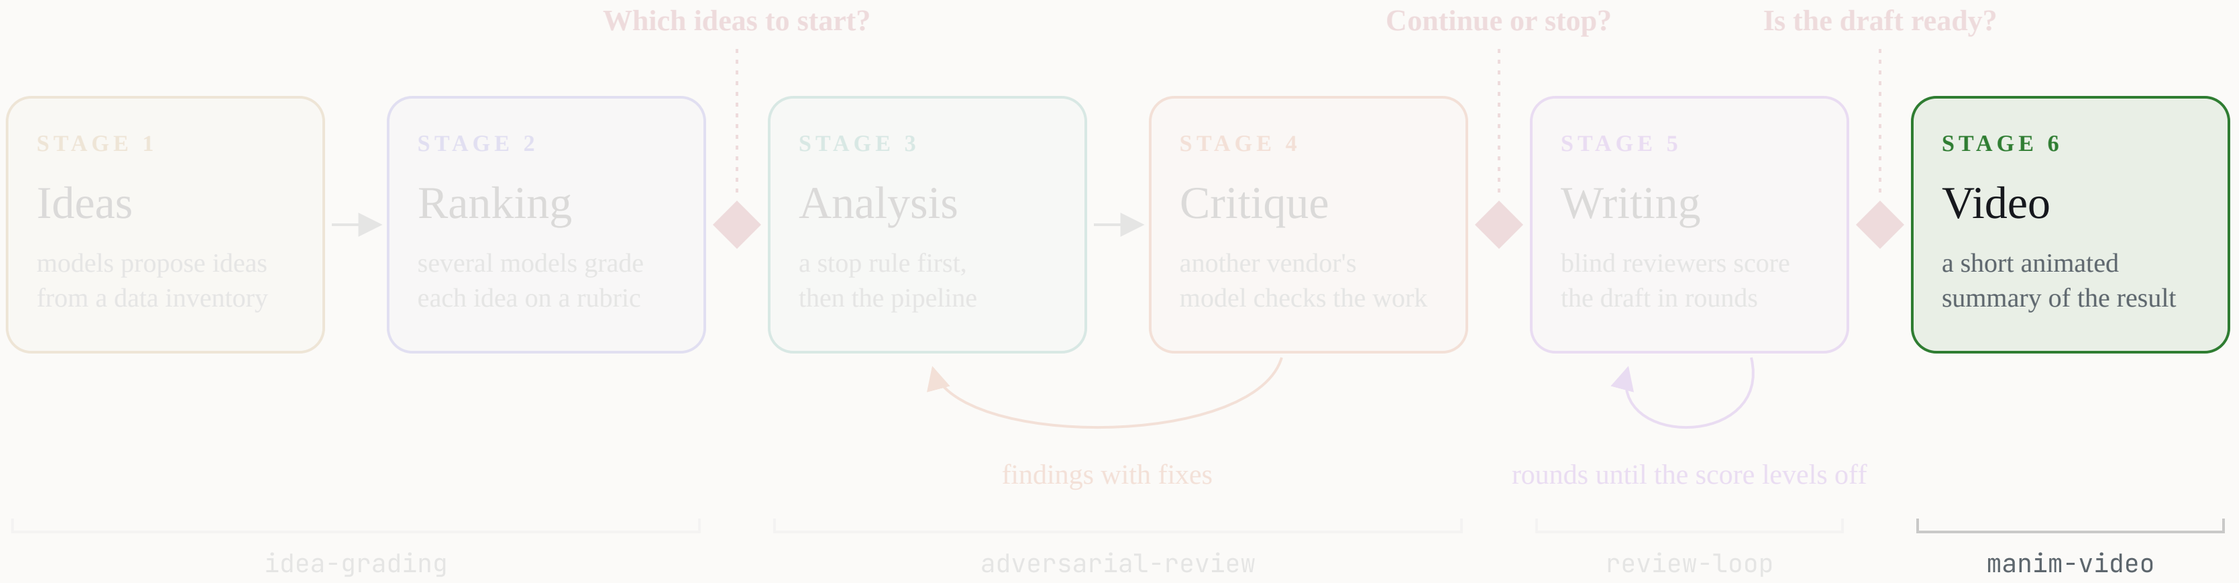

Reviewers for each journal

	JOURNAL A, LABOR RELATIONS	JOURNAL B, DATA SCIENCE
VENUE	Labor relations readers and a 10,000-word cap	Reviewers judge soundness, originality, clarity, and significance
REVIEWERS	Journal referee, methods referee, policy expert	Journal referee, domain researcher, practitioner
VENUE CRITERIA	Contribution against prior work, main-text completeness, logical flow	Soundness and coherence, originality, new insight into behavior
EVERY LOOP	Clarity, exhibit clarity, voice, claims against evidence, and a Codex correctness check	

The workflow

The shared skills folder

SKILLS

`idea-grading`	Brainstorm, grade, and rank ideas
`adversarial-review`	A stop rule, then a second-vendor critic
`review-loop`	Blind, scored review rounds
`manim-video`	An animated summary, numbers checked
`AGENTS.md`	Starter working rules for any agent

INSTALLING

```
# Claude Code, for every project
cp -r skills/* ~/.claude/skills/

# Codex
cp -r skills/* ~/.codex/skills/

# Any other agent: name the file
"Read skills/review-loop/SKILL.md and
 follow it for this draft."
```
